

Song Select.  
I grouped them because if you want to switch from songs repeatedly, up and down, having these two buttons close is more comfortable

Music Controls.  
Play button become pause when pressed

I splitted the "Add" control into two separated buttons, for better usability. I also added a third option: drag and drop of files or folders. Could you implement this? because sometimes could be useful...

Here I changed some columns titles:  
"playing" shows which song is currently playing  
"path" is only the file path.  
I removed the "folder" column because I think it's unuseful

I added here current song time and total duration. It's better having the time visualized, so one could know these information.

My suggestion here is to add a list of the most recent playlists used, so it's really fast select them

This is the new "Find" button. I placed it here because I think it's a feature that is used not very often, but also because when you push it...

... the search panel appears.  
In fact the "search" button is a toggle button.

And here we have the "volume" control. I added three buttons:  
two buttons are for increasing and decreasing the volume;  
the third is for muting.

The main application window titled 'MainWindow - [Preview]' features a top toolbar with play, stop, previous, and next buttons, a progress bar showing '0:15 / 3:54', and a 'Random' checkbox. Below the toolbar is an 'Add:' section with three buttons: 'Single files...', 'All files from folder...', and '... or drop files here'. A 'Playlist...' button is located to the right. The central area contains a table with four columns: 'Playing...', 'Path', 'Name', and 'Queue'. The table lists four songs, all from 'C:\Music'. A search button is on the right side of the table. At the bottom right, there is a volume control section with three buttons (up, down, mute) and a volume slider.

Playing...	Path	Name	Queue
	C:\Music	A cool song 1	
>	C:\Music	A cool song 2	
	C:\Music	A cool song 3	
	C:\Music	A cool song 4	

A dropdown menu for the 'Playlist...' button, showing options: 'Load...', 'Save...', and a list of three playlists: 'C:\Music\playlist1', 'C:\Music\playlist2', and 'C:\Music\playlist3'.

A search panel that appears when the search button is clicked. It includes a 'Search for file:' label, two arrow buttons, a text input field, and a search icon button. Below the input field is a table with the same columns as the main table, showing one song: 'A cool song 1' from 'C:\Music'.

Playing...	Path	Name	Queue
	C:\Music	A cool song 1
